\*Member, IEEE

Index Terms—deep learning, human activity recognition, residual network, inertial sensors

## APPENDIX: ABLATION STUDY

Here we present additional results on the ablation study intended to find the optimal number of residual blocks for our model. This information extends the experimental results of the original paper. The labels of the activities are:

- WA: Walking
- WU: Walking Upstairs
- WD: Walking Downstairs
- SI: Sitting
- ST: Standing
- LA: Laying

The tables in this appendix show the results in terms of 4 metrics:

- Precision (P): It is defined as the number of true positives ( $T_p$ ) over the sum of true positives and false positives ( $F_p$ )

$$P = \frac{T_p}{T_p + F_p} \quad (1)$$

- Recall (R): It is defined as the number of true positives ( $T_p$ ) over the sum of true positive and false negatives ( $F_n$ )

$$R = \frac{T_p}{T_p + F_n} \quad (2)$$

- F1-Score (F1-score): It is defined as the harmonic mean of precision and recall.

$$F1 - score = 2 \cdot \frac{P \cdot R}{P + R} \quad (3)$$

- F1-Score Macro: It is the average of the F1-scores of all the classes.

$$F1 - score_{Macro} = \frac{1}{N} \sum_{i=1}^N F1 - score_i \quad (4)$$

Where N is the number of classes.

- F1-Score Weighted: It is defined as the average of F1-scores of all the classes weighted by the number of instances in each class.

$$F1 - score_{Weighted} = \frac{1}{\sum_{i=1}^N w_i} \sum_{i=1}^N w_i \cdot F1 - score_i \quad (5)$$

Where  $w_i$  is the number of instances in the  $i$ th class and N the number of classes.

TABLE 1. Ablation study data

Number of Residual Blocks	F1-Score Macro	Parameters
6	95.6	959174
5	96.4	564934
<b>4</b>	<b>97.6</b>	<b>234950</b>
3	96.2	136134
2	94.6	53062
1	94.9	28230
0	94.1	3398

TABLE 10. Summary table of the ablation study with the average values over the 6 classes. We display the results in the format:  $\mu \pm std$ , where  $\mu$  is the average value and  $std$  is the standard deviation. The Residual Blocks column refers to the number of residual blocks of each model. \*The average F1-score over the classes has been defined as F1-Score Macro in the equation 4, however, we do not use the term F1-Score Macro as the table heading because we also show the standard deviation.

Residual Blocks	Precision	Recall	F1-Score*
6	$0.958 \pm 0.050$	$0.956 \pm 0.050$	$0.956 \pm 0.028$
5	$0.965 \pm 0.042$	$0.965 \pm 0.033$	$0.964 \pm 0.020$
4	$0.976 \pm 0.022$	$0.976 \pm 0.032$	$0.976 \pm 0.018$
