APPENDIX: 10-FOLD CROSS-VALIDATION

This appendix presents results on the 10-fold cross-validation study. Each fold contains 3 participants. The participants in the test sets are different from the participants in the training sets. This information extends the experimental results of the original paper. The labels of the activities are:

- WA: Walking
- WU: Walking Upstairs
- WD: Walking Downstairs
- SI: Sitting
- ST: Standing
- LA: Laying

The tables in this appendix show the results in terms of 4 metrics:

- Precision (P): It is defined as the number of true positives (T_p) over the sum of true positives and false positives (F_p)

$$P = \frac{T_p}{T_p + F_p} \quad (1)$$

- Recall (R): It is defined as the number of true positives (T_p) over the sum of true positive and false negatives (F_n)

$$R = \frac{T_p}{T_p + F_n} \quad (2)$$

- F1-Score: It is defined as the harmonic mean of precision and recall.

$$F1 - score = 2 \cdot \frac{P \cdot R}{P + R} \quad (3)$$

- F1-Score Average: It is the average of the F1-scores of all the classes.

$$F1 - score_{avg} = \frac{1}{N} \sum_{i=1}^N F1 - score_i \quad (4)$$

Where N is the number of classes.

- F1-Score Weighted: It is defined as the average of F1-scores of all the classes weighted by the number of instances in each class.

$$F1 - score_{Weighted} = \frac{1}{\sum_{i=1}^N w_i} \sum_{i=1}^N w_i \cdot F1 - score_i \quad (5)$$

Where w_i is the number of instances in the i th class and N the number of classes.
